Powering Business Worldwide

We make what matters work.*

At Eaton, we believe that power is a fundamental part of just about everything people do. That's why we're dedicated to helping our customers find new ways to manage electrical, hydraulic and mechanical power more efficiently, safely and sustainably. To improve people's lives, the communities where we live and work, and the planet our future generations depend upon. Because this is what really matters. And we're here to make sure it works.

EATON

Powering Business Worldwide

We make what matters work.

Eaton air circuit breakers - for cost-effective, optimized solutions.

The **IZMX16** is the smallest air circuit-breaker in his class worldwide:

With a volume of only 24 dm³ and a front surface of only 0.092 m² it is just slightly bigger than the size of a DIN A4 sheet of paper! And all this without any loss in terms of performance.

Because of its compact size it allows the user to create innovative concepts, like to install **two circuit** breakers side by side in withdrawable design, **in a 600 mm wide section**. This fact provides for a more cost-effective setup of the section and, in addition, it helps to save operating space. And where remote switching is required, this volume can even accommodate a motor for pre-tightening the stored-energy spring mechanism and some magnetic coils for the on/off command.

More performance in less space is simply impossible.

The **IZMX40** is a circuit breaker for up to 4000 A in a volume of a 3200 A circuit breaker, without the need to install any additional "busbar extensions" in the connection area.

Tests to integrate it into Eaton switchgear systems, such as Modan, xEnergy, PowerXpert, Capitol 20 and Capitol 40 confirm its outstanding technical performance and optimal compatibility thanks to the flexible connection system.

The modular structure, integrated detail solutions as well as a complete range of accessories and additional functions make it easy to adapt the circuit breaker to any of the required applications. Optionally it can be adapted right at the factory – without any extra cost or additional installation work at the circuit breaker.

Horizontal Terminal

Vertical Terminal

Safety - individual solutions combined with IZMX.

Adding individual solutions to IZMX circuit breakers provides both more protection for systems and more safety for personnel in case there is a failure. And it also reduces the risk of unintended interruptions of operation.

These solutions include:

- ARMS™
- ARCON®
- Zone selectivity
- Remote switching
- Testing and documenting with PXP

ARMS™ (Arcflash Reduction Maintenance System)

Eaton's patented Arcflash Reduction Maintenance System (ARMS) technology provides maintenance staff improved safety of downstream maintenance locations using a simple and reliable method to reduce fault clearing times and energy in an arc flash event (radiation, sound, pressure, temperature).

Arcflash Reduction Maintenance System uses a separate analog trip circuit providing faster signal processing and interruption times than the standard (digital) "instantaneous" protection.

The Arcflash Reduction Maintenance System function is activated either directly on the circuit breaker through a local switch or remotely through communications or a contact input.

Arcflash Reduction Maintenance System is optional on both PXR20 and PXR25 trip units.

ARCON®- New 3rd generation (2021 release)

IZMX breakers, combined with ARCON®, help users to avoid damage and to protect people against arc faults as they can effectively be brought under control within 2 ms.

They also protect against arc flashes that – due to their impedance - would not even cause a protective device to react.

Zone selectivity ZSI

Now always on board an can be enabled.

Circuit breakers are directly connected to a signal line, without any additional modules. So, in case of short circuits, they ensure that only the circuit breaker immediately upstream the point of failure will break a short-circuit without delay.

The advantage of the zone selectivity feature – compared to ordinary time selectivity – is the significantly reduced delay time until tripping.

This reduces the thermal and dynamical load that protect the system in addition. In cases of a signal wire damage the back-up time selectivity ensures the selectivity of the system.

For additional safety of maintenance staff we recommend a combination with ARMS® to reduce the released amount of energy even further.

Remote switching

Remote switching requires two magnetic coils (shunt trip and closing release). These coils will activate the mechanism of the ON and OFF buttons. After two switching actions have been carried out, a stored-energy spring mechanism needs to be retightened manually. With an additional motor drive, the retightening action can be automated.

Safety: If the second switching action was an ON action, a third action for switch-off or tripping through the energy of the spring will be ensured.

Safety: OFF commands will always be given priority. A permanent command for the operating-current trip enables the user to lock the circuit breaker in the OFF position.

Thanks to the powerful stored-energy spring, the circuit breaker will carry out the switch command sent to the magnetic coil in less than 35 ms. So the IZMX series circuit breakers are suitable for synchronisation tasks.

Breaker rear side (Drawout breaker)

Easy inspection and maintenance

Inspection and maintenance can be conveniently performed on the draw-out breaker as the primary finger clusters (blue) and levering mechanism are part of the breaker instead of the cassette.

Eaton also offers many field installable accessories and parts, extending the life of the breaker.

The next generation trip unit platform: Power Xpert Release (PXR)

The higher resolution dot matrix display has been enhanced to be always active, constantly displaying the status of

zone selectivity (ZSI), battery condition and rated current In. All data can be transferred via Modbus, Profibus or Ethernet

communication function and for security, a password can be added to avoid unauthorised changes. In addition, a QR

code has been added for easier identification and to access additional information.

Power Xpert Release (PXR) with multiple new features

- Modbus on board for PXR25 (optional for PXR20)
- Large LCD combined with cursor operation for more function and information
- Battery status, ZSI and In visible anytime
- ZSI – the better selective protection is always on board
- Password protection
- Rating plug programmable
- LSI protection can be changed to LI (without time selectivity $T_{sd} = 0$) or LS (without Instantaneous $I_i = 0 \triangle 100\%$ selective)
- 3 free alarm contacts available
- USB port for testing and additional function setup via PC and software PXPMP

- QR code for easier identification and further information

- Improved Diagnostics with breaker health (graph), events and run time

Software Power Xpert Protection Manager (PXPMP) for interaction with PXR

- Dis-/enable functions
- Reading/Changing settings (not basic protection settings)
- Waveform capture
- Multiple test procedures with final test protocol print including date/time stamp
- Print settings and curves

Using the software is easy and self explaining. The cursor above a select able function opens a window with its explanation. Depending on the selection next logical selection opens.

Testers no longer require specialized test tools thanks to the much better software solution in combination with the integrated secondary injection test hardware.

The Power Xpert Release trip unit platform enables engineers to configure and test circuit breakers from a PC via a USB port. As a result, it is easier for users to interact with the trip unit and store or print test data so they can improve their control and maintenance regimes.

Commercial cable

Load your settings and record them.

If any values are changed a "final setting adjustments" screen shows the original and revised settings, highlighting any that were modified. The sheet can be saved or printed.

Final Setting Adjustments

Below is a chart of the parameters and settings. The 'As Found' settings that were captured before testing began are listed for your convenience. Please make any necessary changes to the settings. When the Next button is selected these settings will be captured. These settings will be located in the test report as the 'As Left' settings.

Parameter	As Found	As Left
Rating (In)	2500 A	2500 A
Maintenance Mode	Off	Off
Maintenance Mode Remote Control	Disable	Disable
Maintenance Mode Trip Level	2.5 x In	2.5 x In
Line Frequency	60 Hz	60 Hz
Reverse Feed Breaker	Forward	Forward
Long Delay Thermal Memory	Off	Off
Zone Selective Interlocking	Off	Off
Long Delay Slope	In	In
Long Delay Pickup (In)	1.00 x In	0.70 x In
Long Delay Time	0.5 s	2 s
High Load Alarm Level	85 %	85 %
Short Delay Slope	Flat	Flat
Short Delay Pickup Level	3.0 x Ir	3.0 x Ir
Short Delay Time	0.25 s	0.25 s
Instantaneous Pickup	7 x In	5 x In
Ground Sensing Type	Source/Zero Seq	Source/Zero Seq
Local Ground Fault Protection Type Setting	Alarm	Alarm
Ground Fault Slope	In	In
Ground Fault Pickup	1.0	1.0
Ground Fault Trip Time	0.5 s	0.5 s
Neutral Protection Ratio	100%	100%

Highlighted values indicate a difference between the 'As Found' setting and the existing 'As Left' setting.

Back Reload Settings Next

High current circuit breakers, for example those used in high power distribution systems in industry, are configured and periodically tested by end users

to ensure they continue to work reliably in case of over-currents, and therefore prevent expensive downtime. This new unit allows technicians to simulate or

inject overloads, short circuits, ground faults, do internal current transformer test including its wiring, test with or without tripping and much more using

the Software Power Xpert Protection Manager (PXPM).

Dis-/Enable or change settings, enlarge tripping curves and print curves for documentation.

Utilizing the easy-to-use dashboard, Control Mode can be selected allowing diagnostic and meter data to be reset. In Test Mode individual phases can be tested against values entered as current value or as a multiplier of individual settings.

Select the function you want to test and choose the test current as value or multiplier of setting.

The unit has been developed in response to user demand for an easy-to-use system. Previously test data had to be written down, but with the upgraded software a three page professional test report with date/time stamp, customized information, individual settings/ tripping curves and secondary injection test result, can be generated and stored electronically in a pdf format. This enables technicians to significantly reduce the time it takes for testing, makes it much easier for them to carry out their maintenance, and receive a test report for documentation.

Prior to printing the test report, the customer name, location, environment and equipment condition can be entered.

Report professional all your test results within one document after installation in your system or report your yearly inspection that might be requested in your company.

Get additional information by capturing the waveform and select which curves shall be visible or be printed.

New features include the ability to capture current and optional voltage waveforms along with minimum and maximum values for the phase and neutral conductors. In addition, the waveform can give an indication of the overall quality caused by harmonics, and metering accuracy is now one per cent "of reading".

5 tests are possible. For more tests and other function packages generate the request file in PXPM (go to application settings and then license), then in the webstore <http://eaton.mybigcommerce.com/power-xpert-protection-manager/> click the link for the testing software that you require and upload the PXPM generated request file. Add to cart and checkout, you will then get an email during U.S. business hours, save that file and then load it into PXPM.

IZMX circuit-breakers, INX switch-disconnectors, up to 4000 A^{*)}

Eaton's series IZMX is an innovative line of circuit-breakers up to 4000 A. Engineering and mounting requirements are reduced thanks to only two compact sizes, the modular design and standard accessories. The highlight of the series IZMX: The trip unit family PXR trip electronics. It covers a huge amount of applications. And in conjunction with an optional communication on board ensures that operation can be monitored from all round the globe. The innovative IZMX16 enables two circuit-breakers with a width of only 600 mm to be mounted in a switch cabinet.

Series IZMX in standard offer up to 690 V

Rated operational current from 630 to 4000 A, switching capacity Icu = Ics from 42 to 105 kA/440 V AC, 3 or 4 pole, fixed mounted or withdrawable, electronic releases for multiple protection requirements and several additional options.

Extensive mounting accessories for fixed mounting and withdrawable units

Motor operator IZMX...M... +++ Shunt release IZMX...ST... +++ Closing release IZMX...SR... +++ Undervoltage release IZMX...UV... +++ Auxiliary contact ON-OFF IZMX...AS... +++ Latch check switch IZMX...LCS... +++ Overload trip switch IZMX...OTS +++ Mechanical interlocks and much more.

Brand new control unit family

The new PXR control unit is released in 2016. This new development is the answer on the latest market request of doing individual tests in the field and document it. Therefore Eaton provides an USB link in the trip unit front to be able to correspondent with PC in conjunction with a free download able Power Xpert Protection Manager software.

Further more the PXR control unit offers an extensive range of functions. Protection, measuring, analysis, diagnostics and event memory functions that can be shown on an LCD display or transferred remotely via an integrated communication system, displayed on a web page or sent worldwide by email. PXR can be integrated in different data networks together with Eaton's plug & play communication solution: MODBUS, PROFIBUS or Ethernet. Circuit breakers can then be monitored directly via the Internet.

Worldwide novelty ARMS™ – greater safety for maintenance personnel

In the event of an arc fault the patented ARMS™ (Arcflash Reduction Maintenance System) trips faster than a short-circuit release. In conjunction with the series IZMX, additional components of the ARCON™ arc fault protection system offer additional arc fault protection.

Notes

¹⁾ 0.1 s: trip time is 0.06 s to 0.1 s; 0 s: nominal clear time is 25 ms to 85 ms with or without auxiliary power

²⁾ Requires external 24VDC control voltage supply when continuous current below 20% of I_n

³⁾ Requires external PT module (IZMX-PXR-PTM-1) for voltage sensing input to trip unit

● Standard

○ Optional

— not available

Selectivity-improved with ZSI function

Zone Selective Interlocking (ZSI)

- Zone Selective Interlocking is described in the standard IEC 61912-2 Low voltage switchgear and controlgear.
- The term zone selective interlocking is used to describe a method of controlling circuit breakers to provide selectivity with very short interruption times for the breaker closest to the fault.
- There are different levels (zones) of protection that isolate the fault in the distribution system.
- ZSI may be applied for faults between phases or earth-faults or both.
- ZSI is applied to the short time faults where time selectivity can be achieved with the breakers between the zones.
- Because ZSI does not require auxiliary power or additional modules to operate set up time is minimal and application is easy.

Zone Selective Interlocking (ZSI) Example

Example A – Short-circuit at position 3

- Circuit Breakers CB1, CB3, CB4 all see the short circuit current and register a short delay pick-up.
- Circuit breaker CB4 sends a ZSI out-put blocking signal to CB3 ZSI input. CB3 sends a ZSI output blocking signal to CB1 ZSI input. CB1 sends a ZSI output signal that is not wired. This signal could be wired to a MV relay on the other side of the transformer with a compatible ZSI circuitry.
- CB1 registers the ZSI input signal and starts its timer for 300ms. CB3 registers the ZSI input signal and starts its timer for 200ms. CB4 gets no input from any lower zone circuit breaker. This breaker will then trip immediately without any time delay. CB4 interrupts the fault and CB1 and CB3 stop short delay timing because the fault current is gone.
- If for some reason CB4 does not open and interrupt the fault then at the end of its short delay time CB3 will open and interrupt the fault.

Example B – Short-circuit at position 2

- Circuit Breakers CB1, CB3, see the short circuit current and register a short delay pick-up. CB4 and CB5 do not see the fault current and do not send a ZSI output.
- Circuit breaker CB3 sends a ZSI out-put blocking signal to CB1 ZSI input. CB1 sends a ZSI output signal. In this example that signal is not wired.
- CB1 registers the ZSI input signal and starts a timer for 300ms. CB3 gets no input from any lower zone circuit breaker. This breaker will then trip immediately without any time delay. CB3 interrupts the fault and CB1 stops short delay timing because the fault current is gone. The clearance time is reduced by approximately 150ms.

Example C – Short-circuit at position 1

- Only Circuit breaker CB1 sees the short circuit current and registers a short delay pick-up. CB2, CB3, CB4 and CB5 do not see the fault current and do not send ZSI outputs.
- CB1 sends a ZSI output signal. In this example that signal is not wired.
- CB1 gets no input from any lower zone circuit breaker. This breaker will then trip immediately without any time delay. CB1 interrupts the fault and the clearance time is reduced by approximately 250ms.

Space-saving Circuit Breakers with useful accessories

Breaker rear side (withdrawable breaker)

Eaton Introduces IZMX Series

The IZMX Series from Eaton is a new series of air Circuit Breakers with an extensive range of accessories. The new range provides users with two compact frame sizes up to 4000A, modular design, common accessories, easy to integrate communications. The new trip unit family PXR with LCD display and USB connector is ready for the future. A linked PC with the free download software Power Xpert allows a comfortable use in reading testing and printing for documentation purposes. The innovative concept of the **IZMX16** makes it possible to install two withdrawable circuit-breakers in a 600 mm wide section. This enables more economical section design and also saves operating space. The compact modular design of the **IZMX40** offers customers a full range of high performance ratings in a single frame size simplifying the integration process into panel boards and switch boards. **IZMX** is a new generation and new standard in circuit protection.

Applications

The circuit breakers can be used in four main application areas depending on the type of equipment to be protected:

- System protection
- Motor protection
- Transformer protection
- Generator protection

These key applications make different demands on the switches, which are met with a range of control units.

Switches with closing release

They are particularly suitable for synchronization tasks.

Coupler switches

In addition to the Circuit Breakers, switch-disconnectors are also available. These are used, for example, as coupler switches between different power supplies. The switch-disconnectors are used as coupler switches for different sections of a network in conjunction with our automatic network switching device.

Modular Design, Common Accessories

The retrofitting of accessories is made considerably easy thanks to the efficient "plug & work" technology. Accessory drawers and snap-fit mechanisms make it possible to fit the latest accessories with virtually no tools. This flexibility allows you to respond easily to changing requirements within your system. Most accessories for IZMX are common to both the compact and standard frame sizes. All accessory kits are complete and ready for use.

Standard scope of delivery

- With the new IZMX range, you select a basic device that is already fitted with an electronic release.
- The standard mounting for both frames is on a horizontal mounting plate or on horizontal traverses in the switching cabinet. The IZMX16 can also be fastened to vertical mounting plates.
- With four-pole devices, the neutral conductor is arranged on the left (operators view).
- The neutral conductor is equipped with internal current transformer and can be loaded 100% like the phase conductors.
- The Circuit Breakers are provided with a standard mechanical reclosing lockout. After an overload trip, the fault is usually examined first. After the fault is identified and rectified, the mechanical reclosing lock-out is reset by pressing the red mechanical trip indicator on the front of the Circuit Breaker.
- A "remote-reset" feature and an "automatic reset" are offered as additional ordering options. The remote reset enables resetting the breaker after an over current trip via a control voltage. The automatic reset option enables the circuit breaker to be restored to normal operation immediately after an over current trip (i.e. there is no mechanical reclosing lockout). In these applications compulsory fault analysis is intentionally avoided.
- The number of secondary control cable terminals depends on the accessories fitted.
- If a cassette is ordered without the basic device, this can be already fitted with the maximum number of control cable terminals. For greater economy in large plants, the cassette is also offered without control circuit terminals so that fitting can be carried out later at the installation or when accessories are required at a later time.
- The withdrawable basic device includes the primary finger clusters and levering-in mechanism. NOTE: Some manufacturers mount the primary finger clusters inside the cassette cell, which requiring shutdown of the panel board for inspection and maintenance.
- 2 changeover contacts are provided as standard for ON/OFF status indication.
- The door escutcheon is always included in the scope of delivery. With withdrawable designs this is supplied with the cassette (withdrawable unit).
- On withdrawable units the circuit breaker can be pulled out to inspect the arc chutes and the blue cluster condition (see above picture). With fixed units, it is recommended that sufficient space is provided above the circuit breaker to enable inspection. An additional cover is not required.
- All basic devices that are provided with selective protection (PXR20), feature a LCD display, and all devices provided with power measurement protection PXR25 feature several additional functions.
- On each Circuit Breaker the integrated PXR electronic release is factory fitted with a sealable protective cover.
- If a motor operator is ordered, the "Spring-operated stored energy mechanism tensioned" indicator switch is automatically provided.

Additional benefits Series IZMX

- The "universal" design of the main terminal offers maximum flexibility. The horizontal terminal can be rotated simply at the installation so that it can also be used as a vertical connection. With withdrawable units, additional terminal pieces can even be dispensed with. Both the IZMX breaker and the cassette offer an integrated flange terminal to which the system busbars can be connected directly.
- For this reason, the main terminals are not part of the standard scope of delivery. Do not forget to order terminal adaptations if required.
- Thanks to the separate mounting position, a switching operations counter can now be used also independently of a motor operator.
- Withdrawable unit operation: The unit is actuated with a hand crank supplied as a standard feature and has a secure position in the basic device.
- A coding mechanism between the basic device and the cassette prevents impermissible combinations ("Rejection Interlock").

External 24 V supply

- The standard protection functions of IZMX Series operate independently of an external control voltage supply. The power supply of the electronics unit, for example for overload and short-circuit protection, is implemented via the current transformers integrated in the Circuit Breaker.
- The selective PXR20(V) and power measurement release PXR25(P) with display can be fed with a 24 V DC supply so that the display function can be used without a load. An external 24 V DC power supply is needed if communication functions are required.

CurveSelect characteristics program

Inserting the settings of all protective devices in the system into the free download software confirms the selectivity of the system. All tripping curves can be printed into one diagram for documentation purposes.

ARMS™ ARC flash energy reduction technology optimize safety for maintenance personnel

Personnel safety is of paramount importance in today's work environment. Of recent concern is the potential for serious injury due to exposure to electrical arcs. Eaton's IZMX Series trip units offer the patented ARMS system (Arcflash Reduction Maintenance System™), which offers a non-delayed immediate disconnection in the event of an arc fault. This disconnection is even faster than that of a non-delayed short-circuit release. This function can be activated directly on the Circuit Breaker or via an external switch, such as when maintenance personnel enter a hazardous area.

Major Benefits of ARMS:

- Increased personnel safety – by limiting the available arc flash energy
 - Simple to operate
 - Enabled with circuit breaker door closed by a door mounted lockable switch
 - Enabled only for the time required to perform the desired maintenance work
 - Preserves overcurrent coordination under normal conditions
 - Reduction in incident energy levels may permit reduced levels of Personal Protective Equipment (PPE), therefore improving worker comfort and mobility
- Other components of the ARCON arc fault protection system, in conjunction with Series IZMX, enable an expansion of arc fault protection in stages.

Selection criteria for Circuit Breakers

Fundamental criteria for the selection of Circuit Breakers:

- **Max short-circuit current I_k** max at the Circuit Breaker' point of installation: this value determines the short-circuit breaking capacity or the short-circuit current carrying capacity of the Circuit Breaker. It is compared with the I_{cu} , I_{cs} and I_{cw} values of the switch and essentially determines its size (see technical data).
 - **Rated operational current I_n** which should flow through the respective branch circuit: This value must not be greater than the maximum switch rated operational current of the Circuit Breaker. The rated operational current can be adjusted down using additional rated operational current modules.
 - Ambient temperature of the circuit breaker: This is generally the internal temperature in the control panel. Observe the derating values with increased ambient temperature (see Technical data).
 - Circuit Breaker type: fixed mounted or withdrawable units, 3 or 4 pole.
- Minimum short-circuit current, which flows through the switching device: The release must recognize this value as a short-circuit and may react with a trip.
- Protection functions of the circuit breaker: This is determined by the selection of the respective overcurrent release.

For additional resources and tools for selecting Eaton Air Circuit Breakers please visit us at www.eaton.com/seriesnrx.

Communication Options for IZMX Series

With the respective communication module - PCAM, MCAM or ECAM (Profibus-DP / Modbus/ Ethernet Communications Adapter Module) - every circuit breaker of the NRX series is equipped for modern communication and is fit for the future. The databus not only allows to transmit information, but also to receive commands/settings. Onboard Modbus communication is standard on the PXR25 (P type) trip unit and optional on the PXR20(V type) trip unit upon order. Additional PCAM, MCAM or ECAM module can be installed externally for PXR25 to expand the communication capability. (No more than one external CAM module can be installed).

PROFIBUS-DP configuration

Communications module IZMX-PCAM has a 9-pin D-Sub socket for connection to PROFIBUS. The module works as a slave on PROFIBUS-DP; the data is defined through a standardized device master data file, which permits smooth integration of IZMX in a DP line.

- On the PROFIBUS-DP side the module supports automatic baud rate detection; the PROFIBUS-DP bus address is set through the trip unit's display. The maximum cable length is 2.4 km.
- To operate the IZMX-PCAM, a supply voltage of 24 V DC is required.
- The data connection to the Circuit Breaker is implemented internally through a serial highspeed data connection.

Data access via PROFIBUS-DP

The data on PROFIBUS-DP are offered according to the profile for low-voltage switchgear (LVSG) of PROFIBUS International (PROFIBUS and PROFINET User Group). Five different data structures with varying numbers of parameters are available through the device master data file. This allows a data filter to be easily implemented, which simplifies integration of the IZMX data into the control system.

Modbus configuration

The new PXR has an on board Modbus RTU controller. The device operates as a Modbus slave.

- Baud rate, data format and address (max. 247) for Modbus are set with the input keys of the trip unit. The maximum cable length is 1.2 km.
- The Modbus must be terminated with a 120 Ω terminating resistor.
- To operate the onboard Modbus, a supply voltage of 24 V DC is required.
- The data connection to the Circuit Breaker is implemented internally through a serial highspeed data connection.

Data access via Modbus

The data is contained in comprehensive data tables. Each data point is available as floating-point (IEEE) or fixed-point value. This variance allows the integration of the IZMX to be adapted to the Modbus architecture. This enables a simple means of implementing a data filter, which facilitates the integration of IZMX data in the control system.

Ethernet configuration

Communications module IZMX-ECAM has standard RJ45 socket for connection to Ethernet.

- IP address and related parameters are set through the trip unit's display.
- The data connection to the Circuit Breaker is implemented internally through a serial high speed data connection.
- To operate the IZMX-ECAM, a supply voltage of 24 V DC is required.

Data access via Ethernet

The data is contained in different web pages structured according to the topics „Data View“, „Alarms“, „Logs“ and „Configuration“. This variance allows the integration of the IZMX to be adapted to all Ethernet networks supporting http protocol. An „around the world access“ to the breaker becomes reality and using the SNMP protocol alarm messages can be transported everywhere.

Configuration

IZMX Air Circuit Breakers Catalog Number

Selection Examples

IZMX40 fixed 230VAC electrically operated example (item 3-5 for remote operation):

- ① IZMX40B3-V16F-1 Fixed breaker, including 2a2b Aux contact
- ② IZMX-THV403-3200-1 Main terminal adapter – horizontal/vertical (3200A and below)
- ③ +IZMX-M40-230AD-1 220-240 VAC/DC Charging motor
- ④ +IZMX-ST230AD-1 220-240 VAC/DC Shunt trip
- ⑤ +IZMX-SR230AD-1 220-240 VAC/DC Closing (spring) release
- ⑥ +IZMX-AS22-1 Additional 2a2b Aux contact (4a4b total)
- ⑦ +IZMX-OTS-1 Over current trip switch(OTS) 2CO

IZMX40 withdrawable 230VAC electrically operated example (item 5-7 for remote operation):

- ① IZMX40B3-V16W-1 Withdrawable breaker, including 2a2b Aux contact
- ② +IZMX-CAS403-2000-1 Cassette(2000A and below)
- ③ +IZMX-SH403-1 Safety shutters
- ④ IZMX-THV403-3200-1 Main terminal adapter – horizontal/vertical (3200A and below)
- ⑤ +IZMX-M40-230AD-1 220-240 VAC/DC Charging motor
- ⑥ +IZMX-ST230AD-1 220-240 VAC/DC Shunt trip
- ⑦ +IZMX-SR230AD-1 220-240 VAC/DC Closing (spring) release
- ⑧ +IZMX-AS22-1 Additional 2a2b Aux contact (4a4b total)
- ⑨ +IZMX-OTS-1 Over current trip switch(OTS) 2CO

Notes

All „+“ articles are factory installed accessories and ready for use.
All accessory articles without „+“ are complete „field kits“.

THE KITS CONTAIN ALL REQUIRED PARTS, INSTALLATION INSTRUCTION IL AND IN CASE OF ELECTRICAL ACCESSORY THE CONTROL TERMINALS.

Notes

¹⁾ 3pole breaker need an external wired N-conductor current transformer.

²⁾ Power metering requires one external voltage transformer module ...PTM for 1-16 trip units.

General: Articles without „+“ are complete field kits for spare/upgrading purposes.

Articles with „+“ add further factory installed function into the configuration.

IZMX16(40)...V(P)... PXR20/25 Long Delay(L) and Short Delay(S) Curves
L-Protection: I^2t -Characteristic curve and S-Protection: Flat characteristic curve

Notes

1. Long Delay pickup is 110% of the I_r setting (0.4, 0.5, 0.6, 0.7, 0.75, 0.8, 0.9, 0.95, 1.0) with $\pm 5\%$ tolerance.
2. Long Delay Time Settings 0.5s to 24s have $+0\%/-30\%$ tolerance.
3. If Thermal Memory is enabled, trip times may be shorter than indicated in this curve.
4. Short Delay pickup settings have $\pm 10\%$ tolerance.
5. If the Long Delay time is projected to be faster than the Short Delay time, the Long Delay trip time will go no faster than the Short Delay time value.
6. With ZSI enabled, tripping times for 3-phase faults, no aux. power will be a maximum of 75ms for 60Hz and 80ms for 50Hz.

IZMX16(40)...V(P)... PXR20/25 Long Delay(L) and Short Delay(S) Curves S-Protection with: I²t-Characteristic curve ON

Notes

- Long Delay pickup is 110% of the I_r setting (0.4, 0.5, 0.6, 0.7, 0.75, 0.8, 0.9, 0.95, 1.0) with ± 5% tolerance.
- Long Delay Time Settings 0.5s to 24s have +0% /-30% tolerance.
- If Thermal Memory is enabled, trip times may be shorter than indicated in this curve.
- Short Delay pickup settings have ±10% tolerance.
- Short Time delay (0.5, 0.4, 0.3) I²t slopes have a +0%/-30% tolerance, 0.1s slope has a +0%/-40% tolerance.
- If the Long Delay time is projected to be faster than the Short Delay time, the Long Delay trip time will go no faster than the Short Delay time value.
- With ZSI enabled, tripping times for 3-phase faults, no aux. power will be a maximum of 75ms for 60Hz and 80ms for 50Hz

IZMX16(40)...V(P)... PXR20/25 Long Delay(L) Curves
L-Protection: 10.5t-Characteristic curve; S-Protection: flat

Notes

1. Long Delay pickup is 110% of the I_r setting (0.4, 0.5, 0.6, 0.7, 0.75, 0.8, 0.9, 0.95, 1.0) with $\pm 5\%$ tolerance.
2. Long Delay Time Settings 0.5, 1, 2, 4, 7, 10, 12, 15, 20, 24s (not all shown) have $+0\%/-30\%$ tolerance.
3. If Thermal Memory is enabled, trip times may be shorter than indicated in this curve.
4. Short Delay pickup settings of 1.5, 2, 2.5, 3, 4, 5, 6, 7, 8, 10 (not all shown) have $\pm 10\%$ tolerance.
5. If the Long Delay time is projected to be faster than the Short Delay time, the Long Delay trip time will go no faster than the Short Delay time value.
6. With ZSI enabled, tripping times for 3-phase faults, no aux. power will be a maximum of 75ms for 60Hz and 80ms for 50Hz.

IZMX16(40)...V(P)... PXR20/25 Long Delay(L) Curves L-Protection: $I_{0.5t}$ -Characteristic curve; S-Protection: I^2t

Notes

- Long Delay pickup is 110% of the I_r setting (0.4, 0.5, 0.6, 0.7, 0.75, 0.8, 0.9, 0.95, 1.0) with $\pm 5\%$ tolerance.
- Long Delay Time Settings 0.5, 1, 2, 4, 7, 10, 12, 15, 20, 24s (not all shown) have $\pm 0\%/-30\%$ tolerance.
- If Thermal Memory is enabled, trip times may be shorter than indicated in this curve.
- Short Delay pickup settings of 1.5, 2, 2.5, 3, 4, 5, 6, 7, 8, 10 (not all shown) have $\pm 10\%$ tolerance.
- Short Time delay (0.5, 0.4, 0.3) I^2t slopes have a $\pm 0\%/-30\%$ tolerance, 0.1s slope has a $\pm 0\%/-40\%$ tolerance.
- If the Long Delay time is projected to be faster than the Short Delay time, the Long Delay trip time will go no faster than the Short Delay time value.
- With ZSI enabled, tripping times for 3-phase faults, no aux. power will be a maximum of 75ms for 60Hz and 80ms for 50Hz.

IZMX16(40)...V(P)... PXR20/25 Long Delay(L) Curves
L-Protection: I_{1t}-Characteristic curve; S-Protection: flat

Notes

1. Long Delay pickup is 110% of the I_r setting (0.4, 0.5, 0.6, 0.7, 0.75, 0.8, 0.9, 0.95, 1.0) with $\pm 5\%$ tolerance.
2. Long Delay Time Settings 0.5, 1, 2, 4, 7, 10, 12, 15, 20, 24s (not all shown) have $+0\%/-30\%$ tolerance.
3. If Thermal Memory is enabled, trip times may be shorter than indicated in this curve.
4. Short Delay pickup settings have of 1.5, 2, 2.5, 3, 4, 5, 6, 7, 8, 10 (not all shown) $\pm 10\%$ tolerance.
5. If the Long Delay time is projected to be faster than the Short Delay time, the Long Delay trip time will go no faster than the Short Delay time value.
6. With ZSI enabled, tripping times for 3-phase faults, no aux. power will be a maximum of 75ms for 60Hz and 80ms for 50Hz.

IZMX16(40)...V(P)... PXR20/25 Long Delay(L) Curves L-Protection: I^1t -Characteristic curve; S-Protection: I^2t

Notes

- Long Delay pickup is 110% of the I_r setting (0.4, 0.5, 0.6, 0.7, 0.75, 0.8, 0.9, 0.95, 1.0) with $\pm 5\%$ tolerance.
- Long Delay Time Settings 0.5, 1, 2, 4, 7, 10, 12, 15, 20, 24s (not all shown) have $\pm 0\%/-30\%$ tolerance.
- If Thermal Memory is enabled, trip times may be shorter than indicated in this curve.
- Short Delay pickup settings of 1.5, 2, 2.5, 3, 4, 5, 6, 7, 8, 10 (not all shown) have $\pm 10\%$ tolerance.
- Short Time delay (0.5, 0.4, 0.3) I^2t slopes have a $\pm 0\%/-30\%$ tolerance, 0.1s slope has a $\pm 0\%/-40\%$ tolerance.
- If the Long Delay time is projected to be faster than the Short Delay time, the Long Delay trip time will go no faster than the Short Delay time value.
- With ZSI enabled, tripping times for 3-phase faults, no aux. power will be a maximum of 75ms for 60Hz and 80ms for 50Hz.

IZMX16(40)...V(P)... PXR20/25 Long Delay(L) Curves
L-Protection: I_{4t}-Characteristic curve; S-Protection: flat

Notes

1. Long Delay pickup is 110% of the I_r setting (0.4, 0.5, 0.6, 0.7, 0.75, 0.8, 0.9, 0.95, 1.0) with ±5% tolerance.
2. Long Delay Time Settings 0.5s to 7s have +0%/-30% tolerance.
3. If Thermal Memory is enabled, trip times may be shorter than indicated in this curve.
4. Short Delay pickup settings of 1.5, 2, 2.5, 3, 4, 5, 6, 7, 8, 10 (not all shown) have ±10% tolerance.
5. If the Long Delay time is projected to be faster than the Short Delay time, the Long Delay trip time will go no faster than the Short Delay time value.
6. With ZSI enabled, tripping times for 3-phase faults, no aux. power will be a maximum of 75ms for 60Hz and 80ms for 50Hz.
7. For the Long Time I_{4t} slope only, all settings above 7 seconds will default to a maximum allowable 7 second time delay band.

IZMX16(40)...V(P)... PXR20/25 Long Delay(L) Curves L-Protection: I^4t -Characteristic curve; S-Protection: I^2t

Notes

- Long Delay pickup is 110% of the I_r setting (0.4, 0.5, 0.6, 0.7, 0.75, 0.8, 0.9, 0.95, 1.0) with $\pm 5\%$ tolerance.
- Long Delay Time Settings 0.5s to 7s have $+0\%/-30\%$ tolerance.
- If Thermal Memory is enabled, trip times may be shorter than indicated in this curve.
- Short Delay pickup settings of 1.5, 2, 2.5, 3, 4, 5, 6, 7, 8, 10 (not all shown) have $\pm 10\%$ tolerance.
- Short Time delay (0.5, 0.4, 0.3) I^2t slopes have a $+0\%/-30\%$ tolerance, 0.1s slope has a $+0\%/-40\%$ tolerance.
- If the Long Delay time is projected to be faster than the Short Delay time, the Long Delay trip time will go no faster than the Short Delay time value.
- With ZSI enabled, tripping times for 3-phase faults, no aux. power will be a maximum of 75ms for 60Hz and 80ms for 50Hz.
- For the Long Time I^4t slope only, all settings above 7 seconds will default to a maximum allowable 7 second time delay band.

IZMX16(40)...V(P)... PXR20/25 Ground(G) Curves
G: Ground fault protection - Flat characteristic curve

Notes

1. Ground Pickup settings shown are for Residual sensing with a tolerance of $\pm 10\%$.
Pick up settings for Source Ground/Zero Sequence sensing have a tolerance of $\pm 15\%$.
2. Ground slope Flat, trip time tolerance is $+0\text{ms}/-80\text{ms}$ for all settings except 0.1s setting is $+0\text{ms}/-40\text{ms}$
3. If Thermal Memory is enabled, trip times may be shorter than indicated in this curve.
4. With ZSI enabled, tripping times for 3-phase faults, no aux. power will be a maximum of 75ms for 60Hz and 80ms for 50Hz.

IZMX16(40)...V(P)... PXR20/25 Ground(G) Curves G: Ground fault protection-I²t-Characteristic curve ON

Notes

- Ground Pickup settings shown are for Residual sensing with tolerance of $\pm 10\%$.
Pick up settings for Source Ground/Zero Sequence sensing have a tolerance of $\pm 15\%$.
- If Thermal Memory is enabled, trip times may be shorter than indicated in this curve.
- Break point is at $0.625 \times I_n$ from I^2t to flat.
- Ground slope: I^2t , tolerance is:
0.1s, 0.2s : $+0\%/-40\%$
0.3s, 0.4s, 0.5s : $+0\%/-30\%$
- With ZSI enabled, tripping times for 3-phase faults, no aux. power will be a maximum of 75ms for 60Hz and 80ms for 50Hz.

IZMX16(40)...V(P)... PXR20/25 Instantaneous(I) Curves
I-Protection: Adjustable

Notes 1. The Instantaneous pickup settings have a $\pm 10\%$ tolerance.

IZMX16(40)...V(P)... PXR20/25 Instantaneous(I) Curves Instantaneous Trip at High Fault Currents

Notes

1. The 90kA peak curve applies to IEC and UL 489 Selective NF (IZMX16) frame Series NRX breakers.
2. The 167kA peak curve applies to RF (IZM40) frame Series NRX breakers with an (Icu) interrupting rating of 100kA and above.
3. The 138kA peak curve applies to UL 489 Selective Series NRX RF frame series with an (Icu) interrupting rating of 85kA and above.
4. The 18-67kA peak curves apply to UL 489 Switchboard Protective Series NRX breakers with the instantaneous asymmetrical peak value of 22.5 times the frame current rating.
5. The Instantaneous pickup settings have a $\pm 10\%$ tolerance.
6. This protection is functional even when the Instantaneous is set to the OFF position.
7. The PXR trip unit will light the Instantaneous LED for a High Instantaneous trip.
8. The total High Instantaneous clearing times shown are conservative and consider the maximum response times of the trip unit, the circuit breaker opening, and the interruption of the current under factors that contribute to worst case conditions, such as: maximum rated voltages, single phase interruption, and minimum power factor. Faster clearing times are possible depending on the specific system conditions.

IZMX16...V(P)... PXR20/25 Maintenance Mode Curve

- Notes**
- 1. Reduction Pickup settings have a $\pm 20\%$ tolerance.
 - 2. The trip unit will light the Instantaneous LED for a Maintenance Mode protective trip.

Selectivity between incoming circuit breaker ACB, outgoing circuit breaker MCCB without using ZSI function

IZMX16...

I_n : Rated operational current
 I_u : Rated uninterrupted current
 I_{cu} : Rated short-circuit breaking capacity
 I_i : Set value non-delayed short-circuit releases

Selectivity 415 V AC

Selectivity exists between incoming circuit-breaker 1 and outgoing Circuit Breaker 2 if, only outgoing breaker 2 trips at position 2 - during a short-circuit. System sections 3 and 4 remain operational.

Selection:

Provided that the short-circuit current does not exceed those - values specified ($I_{cc\ eff}$)
 These details represent the limits of selectivity.
 Both Circuit Breakers will switch off with higher short-circuit-currents.
 On IZMX Circuit Breakers with V, P releases, the delay time t_{sd} must be at least 100 ms longer than the delay time of the next downstream levels (2, 3, 4). The I_i setting of IZMX breaker should be on OFF to allow on any short circuit level a time delayed tripping.

Instructions ¹⁾ Permissible continuous current for Circuit Breakers operating in switchboards at various internal ambient temperatures.

The switchboard's internal ambient temperature should be estimated using the calculation methods of IEC regulation.

²⁾ Rated continuous current stated applies only with 4 x 120 x 10 mm vertical terminal rails painted black. The values are reduced by 100 A each with 4 x 100 x 10 mm.

Instructions ¹⁾ Permissible continuous current for Circuit Breakers operating in switchboards at various internal ambient temperatures.

The switchboard's internal ambient temperature should be estimated using the calculation methods of IEC regulation.

²⁾ Rated continuous current stated applies only with 4 x 120 x 10 mm vertical terminal rails painted black. The values are reduced by 100 A each with 4 x 100 x 10 mm.

	3950	0.800	0.960
	5000	0.700	0.940

Notes

IZMX circuit breakers can be applied at their full voltage and current ratings up to a maximum altitude of 2000 meters above sea level. When installed at higher altitudes, the ratings are subject to correction factors. Short circuit current is not affected as long as the voltage is rated in accordance with the table.

Recommended safety clearances

The following information about safety distances is intended to provide a guideline for the installation of circuit-breakers in an enclosure.

	Enclosure clearance	To insulated surface	To grounded metal surface	With cell switch or locking facilities
		mm	mm	mm
Withdrawable	a	25	25	25
	b	25	25	25/75
Fixed	a	25	25	—
	b	30	70	—

a Δ distance from highest point of breaker or cassette.

Recommended enclosure clearance and ventilation

The illustration shows a typical enclosure.

The table below lists the associated minimum distances between enclosures and ventilation openings.

This information is intended as a guideline for constructing a suitable circuit-breaker enclosure. Ensure the integration complies with IEC 61439.

c	Width of cassette + 75 mm
d	550 mm
e	4450 mm (front control panel bay)
Ventilation holes	160 cm ² (800 - 3200 A) 320 cm ² (4000 A)
	} Top and bottom

- 4 Top or rear vent
- 5 Rear or lower vent

Search/result list: high performance search with suggestion list by "Entry".

A suggestion list brings the search an above-average success rate, because nothing makes less sense than a 0-hit result.

Navigation Products Product profiles

Control circuit devices

Number of products: 1506

Product range

- ☐ Accessories
- ☐ Foot and palm switches
- ☐ RMO-Titan (drilling dimensions 22.5 mm)
- ☐ RMO-Titan (drilling dimensions 16 mm)
- ☐ GL... signal towers

Basic function

- ☐ Acoustic indicator
- ☐ Customer specific complete devices
- ☐ Double actuators
- ☐ Emergency-stop actuators
- ☐ Foot and palm switches
- ☐ Four-way operator
- ☐ Half pushbuttons
- ☐ Illuminated pushbuttons
- ☐ Illuminated selector switch actuators
- ☐ Indicator lights
- ☐ Key-operated actuators
- ☐ Mushroom-headed pushbutton
- ☐ Position switches
- ☐ Push buttons
- ☐ Selector switch actuators
- ☐ Signal towers
- ☐ STOP pushbuttons

The selection tools: 3 clicks to product

Selection-relevant features allow users to locate their products easily, without problems. From general to specific to product – 3 clicks!

The catalogue portal is the entry page to the Online Catalogue. Important elements include the powerful search function and the graphical navigation. The clearly designed user interface makes the application particularly easy to use.

Continuous updating ensures that you will always find the latest product data and news.
